	VOR-A	113.85	293	FLG	10600
21	VOR/DME	113.85	236	SHEFF	9600

STANDARD INSTRUMENT DEPARTURES		

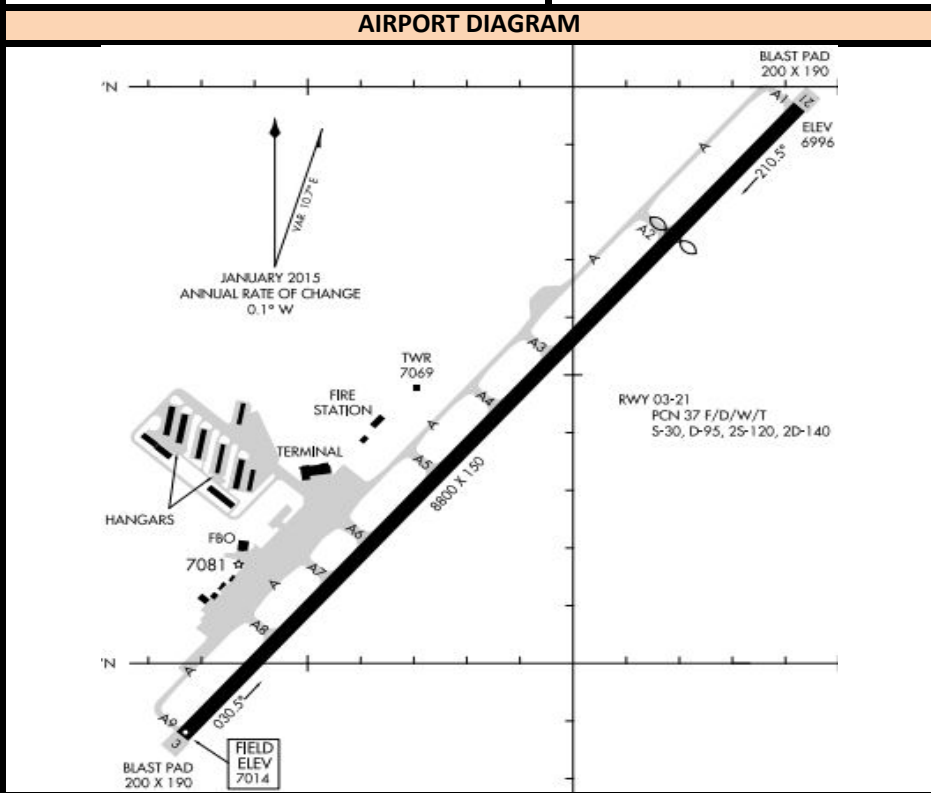

**FIXED BASE OPERATORS**

Wiseman Aviation, Inc.  
(Map Not Available)

**NEARBY NAVAIDS**

VOR/DME		
FLAGSTAFF	FLG	113.85

**IFR RELEASES**

- One In One Out Rule: P50 will either approve or not approve the control towers to use visual separation between IFR operations. Even if visual separation is approved, IFR releases are still mandatory. All releases will have a 3 minute void time. Example release:  
 FLG\_TWR: "Request release N123" PHX\_APP: "N123 released"  
 PHX\_APP can amend a Standard Release, i.e. "N123 released maintain 4000"  
 - How this works:  
 1. During IFR clearance, give standard altitude to maintain, or Climb via SID, whichever is appropriate for that specific aircraft at your airport.  
 2. During taxi or when holding short of departure runway, request release.  
 3. When released by PHX\_APP click the 3:00 Minute timer in VRC. Depart the aircraft ASAP. If you're unable to clear the aircraft for takeoff within this time, request release again from PHX\_APP.

**AIRPORT SPECIFIC PROCEDURES**

Runway 21 Standard Release:  
 - (All Departures) "Fly runway heading, maintain 12000"  
 Runway 3 Standard Release:  
 - (All Deps) "Turn right heading 090, maintain 12000"
